

Typography and Node Test

Every card below isolates a formatting or geometry case. The export should stay readable, aligned, clipped, and visually consistent in light and dark themes.

Heading One

Heading Two

Heading Three

Heading Four

Body text follows the complete heading scale.

heading scale

inline styles

Inline Formatting

Bold text

Italic text

~~Strikethrough~~

inline code

structured content

Lists and Tasks

1. First ordered item
2. Second ordered item

- Parent item
- Nested item

- ☒ Complete
- ☐ Incomplete

semantic blocks

Quote and Divider

Good exports preserve hierarchy, spacing, and contrast.

A divider should remain subtle but visible.

Code Block

```
const output = await exportCanvas({
  theme: 'dark',
  scale: 2,
});
```

The block must clip inside the card.

overflow

Long Content

This deliberately long paragraph verifies predictable line wrapping and clipping. It repeats enough information to exceed a compact card without escaping its border, covering neighboring nodes, or exposing the Canvas grid through the surface. A professional export should keep the visual hierarchy intact even when source content is larger than the available rectangle.

size extremes

Tiny node

Clipped safely.

geometry

Extra-wide node

A wide card checks horizontal composition, border radius, line length, and edge anchoring.

nested path

Rich Markdown Fixture

This note exercises the Markdown renderer with common Obsidian content.

Overview

Use **bold**, *italic*, ~~strikethrough~~, inline code, and a [safe external link](#).

A blockquote should have a visible accent line and comfortable padding.

Task list

- ☒ Completed export check
- ☐ Pending visual review
- ☐ Compare light and dark themes

Ordered list

1. Open the Canvas.
2. Select several output formats.
3. Compare every export against Obsidian.

Selected section

This heading is used by a Canvas file node with a heading subpath.

- Only this section should appear in the selected-section card.
- Content from the next heading must not leak into the export.

Selected subsection

Nested content belongs to the selected section.

Embedded section

The exporter should show this sentence without exposing the frontmatter.
